

8. Preshipment Vehicle Inspections for Cleanliness and Integrity should be performed prior to loading any carrier with company products, in order to ascertain that the vehicle is free from:
- Dust, dirt, oil, grease, residue from previous loads, signs of pests, odors, or fumes;
 - Holes in the roof, walls, or floor of the vehicle body, through which precipitation, pests, or foreign substances can gain entry; and
 - Internal damage to the vehicle body with presence of splinters or metal projections.

Vehicles not meeting the inspection criteria should not be loaded.

9. Security Measures for Incoming Carriers, whether carrying inbound drug products or medical devices or intended for outbound drug products or medical devices, should include:
- Driver identification and verification that driver is employed by carrier firm;
 - Record made of carrier tractor and trailer registration;
 - Driver provided escort if non-site employee, when entry into facilities is necessary; and
 - Driver's Order or Bill of Laden verified to match expectations.

Additionally for full truckload shipments, the trailer seal number should be recorded and the seal's integrity verified.
